

B&W Productions Wages Restore Point

Document purpose

This document records the current working wages state as a restore-point handover snapshot.

Date

2026-09-13

Stable URLs

- **Team URL:** <https://bwprodssystem.co.za/wages>
- **Admin URL:** <https://bwprodssystem.co.za/admin>

Backup archive restore point

- **Project backup:** <https://www.genspark.ai/api/files/s/6k3morJo>

What is working in this restore point

- Workers use a single **Add Current Shift** flow.
- Workers do **not** need a separate **Add a Missed Shift** button.
- Workers can enter shifts for dates in the previous payroll window.
- Previous-payroll entries are automatically treated as missed shifts in backend logic.
- Locked-payroll errors are suppressed from the worker-facing flow.
- Conflict / overlap / triple-billed review remains admin-side only.
- The worker-facing **View payroll week** section has been removed.
- Previous-payroll temporary saves resurface correctly in the worker list.
- Previous-payroll final submissions are supported through the same unified flow.
- Overnight shifts are automatically detected from the entered time range.
- Example: **23:00 to 02:00** is treated as a next-day / overnight shift on the backend.
- Normal same-day shifts are also accepted correctly.
- Example: **18:00 to 22:00** remains a same-day shift.
- Opening the **Team URL** now lands on the wages front page first.
- The team URL no longer auto-enters a saved worker session such as Givemore when no PIN has been entered.

Worker-facing rules in this version

- Workers should use only the **Team URL**.
- Workers should always use the single shift-entry flow.
- Workers do not need to choose a payroll-week rollback control.
- Workers do not need to tick a separate overnight checkbox.
- The system automatically interprets cross-midnight times as next-day shifts.

Admin-facing rules in this version

- Admin should use only the **Admin URL**.
- Admin can review the broader system from the backend dashboard.
- Payroll review / overlap checks remain visible on the admin side rather than the worker side.

Final handover recommendation

If a future change breaks wages, restore from the backup archive above and use this document as the reference for the expected working behavior.
